

## Fork Positioner for Forklifts

Forklift Fork Positioner - A fork positioner is actually a tool made out of top quality materials meant to withstand the most difficult operations and work environments. This particular piece of equipment could enable the one driving to be able to maneuver the forks hydraulically without leaving the seat. Side shifting units have the extra ability to be able to laterally position the arms or the entire load in order to facilitate more accurate carrying and position in a faster and much more effective manner.

The unique blade pocket design can enable the one operating it to be able to securely swing the unit's blades without any worry of destroying the positioning cylinders. This allows the operator the alternative to either execute simultaneous or independent fork movement, depending on the requirements of the job. For most forklifts with non-OEM carriages, complete carriages are required. Standard OEM carriages can be transformed into fork positioners on existing units.
