

Toyota Forklift Part

Toyota Forklift Parts - Since 1992, Toyota Material Handling inc., U.S.A., also called TMHU, has been the top selling lift truck dealer in the United States. Proudly celebrating more than 40 years of operations, the Irvine, California established business offers a wide-ranging line of quality lift trucks. Due to their status of excellence, reliability, and sturdiness, Toyota remains popular in this competitive market. Quality is the foundation of Toyota's notorious Toyota Production System practiced at all manufacturing facilities, including TIEM, which is stands for Toyota Industrial Equipment Manufacturing, situated in Columbus, Indiana. The majority of the Toyota lift trucks sold in the U.S. are manufactured here.

Every one of Toyota's manufacturing facilities within Canada and the U.S. comply with the International Organization for Standardization or ISO 14001 standard. The Columbus TIEM plant has been honored on many occasions for its commitment to relentless progress and its environmentally friendly systems. It is the first and only producer to offer EPA and CARB-certified Compressed Natural Gas powered lift trucks on the market. For instance, the Toyota 8-Series IC lift trucks emit 70% less smog forming emissions than the current federal EPA standards and have complied with California's strict emission standards and regulations.

Toyota Material Handling, U.S.A. - The Industry Leader

Brett Wood, President of TMHU, links Toyota's success to its robust dedication to manufacture the best quality lift vehicles at the same time as delivering the utmost customer service and support. "We must be able to learn and predict the needs of our customers," said Brett Wood. "As a leader, our success also depends on our ability to address our customers' operational, safety and environmental cost issues." • TMHU's parent company, Toyota Industries Corporation, often known as TICO, is listed in Fortune Magazine as the world's biggest lift truck dealer and is amongst the magazines prominent World's Most Admired Companies.

Redefining Environmental Accountability

Toyota Industries Corporation, as the parent company, has instilled a rich company doctrine of environmental stewardship in Toyota. Not a lot of other organizations and no other lift truck manufacturer can match Toyota's record of protecting the environment while simultaneously encouraging the economy. Environmental responsibility is a fundamental aspect of company decision making at Toyota and they are proud to be the first and only maker to offer UL-listed, EPA- and CARB-certified Compressed Natural Gas powered lift trucks. Yet an added reason they remain a leader within the industry.

Toyota first launched the 8-Series line of lift vehicles in 2006, again exhibiting its leadership and innovation in the industry. Featuring an exclusive emission system that eclipsed both Federal EPA emission principles, and California's more environmentally friendly emission standards. The end invention is a lift vehicle that creates 70 percent fewer smog forming emissions than the current Federal standards tolerate.

Also starting in 2006, together with the Arbor Day Foundation, Toyota added to its commitment to the environment. To this day more than 58,000 trees have been embedded in the ground throughout national forests and community parks that were damaged by fires and other ecological causes. 10,500 seedlings have also been scattered through Toyota Industrial Equipment's network of dealers to non-profit organizations and neighborhood consumers to help sustain communities all over the U.S.

Toyota's lift vehicles offer better strength, visibility, productivity, ergonomics, and all the leading safety technology that has made Toyota an industry leader. The company's System of Active Stability, often known as "SAS"•, helps reduce the chance of accidents and injuries, and increasing productivity levels while minimizing the potential for merchandise and equipment breakage.

System Active Stability is able to discern factors that could lead to lateral instability and likely lateral overturn. When any of these conditions have been detected, the SAS will instantly engage the Swing Lock Cylinder to re-stabilize the rear axle. This alters the lift truck's stability footprint from triangular in shape to rectangular, offering a major increase in stability which substantially reduces the likelihood of a mishap from a lateral overturn. The Active Mast Function Controller or the Active Control Rear Stabilizer also helps to prevent injuries or accidents while adding stability.

SAS was originally released to the market on the 7-Series internal combustion products in 1999 and subsequently catapulted Toyota into the industry leader for safety. Since then, SAS have been built-in to nearly all of Toyota's internal combustion models. It is standard equipment on the new 8-Series. There are more than 100,000 SAS-equipped lift trucks in operation, exceeding 450 million hours combined. The increased population of SAS-equipped trucks in the field, along with compulsory operator training, overturn fatalities across all designs have decreased by 13.6% since 1999. Also, there has been an overall 35.5% decrease in industry wide collisions, loss of control, falls and tip overs from a lift truck for the same period.

Toyota's measure of brilliance reaches far beyond its technological achievements. The company maintains an extensive Operator Safety Training curriculum to help purchasers meet OSHA standard 1910.178. Instruction packages, video lessons and a variety of resources, covering a broad scope of topics-from personal safety, to OSHA rules, to surface and cargo situations, are offered through the vendor network.

Ever since the sale of its first lift truck in the U.S. to the fabrication of its 350,000th lift truck produced in 2009 at Toyota Industrial Equipment Manufacturing, TMHU has continued an unbroken existence in the U.S. This fact is demonstrated by the statistic that 99% of Toyota lift trucks bought in America today are built in the United States.

Based in Columbus, Ind., the Toyota Industrial Equipment Mfg. campus equals 998,000 square feet of facilities across 126 acres. Facilities include a National Customer Center, as well as production operations and supply centers for equipment and service

components, with the entire commitment exceeding \$113 million dollars.

The contemporary NCC was built to serve TMHU customers and dealers. The facility includes a 360-degree display room, a presentation theater complete with stadium seating for 32, an area for live merchandise demonstrations with seating capability for 120; a presentation theater; Toyota's Hall of Fame showcasing Toyota's history since the birth of its creator, Sakichi Toyoda, in 1867, and lastly a training center.

TMHU has 68 official industrial equipment dealers, along with 189 dealership locations throughout the United States, offering the most complete and inclusive consumer support and customer service in the industry. The company's new and Licensed Used lift vehicles, service, parts, and financing features make Toyota dealerships a one-stop shop to ensure overall client satisfaction.
